Continuation of Substance of Interview including description of the general nature of what was discussed: The examiner called applicant's representative to inform him that claims 1 and 8 could read on Sepke '453 as Sepke '453 is considered to have a combined handle 115 and inlet flow passageway 116 spaced from the sidewall of the dirt container 106. Additionally, applicant's representative was informed that claim 8 is broad enough to read on a container having a hollow handle spaced from the container wall. The examiner proposed amending claims 1 and 8 to recite --a handle defining an inlet flow passageway-- and incorporating the language of claim 11 into claim 8 to obviate a rejection over Sepke et al. '43 and any potential rejection over a container. Applicant's representative agreed to the changes.
